New investment in P-X Systems to accelerate European market launch of OT security solution

3 June 2026 – Deep-tech cybersecurity company P-X Systems has secured an investment from SecFund, Damen Maritime Ventures and Savin Capital Partners. The Amsterdam-based company has developed an innovative technology to monitor and detect cyberattacks without relying on network connectivity. The investment will be used to accelerate its European market introduction.

Founded ten years ago in Amsterdam, P-X Systems is a strong example of dual-use technology. The company focuses on Operational Technology (OT) security to protect critical infrastructure—such as bridges and locks, energy systems and defence applications—making it relevant for both civilian and military use. In doing so, P-X Systems directly contributes to the ambition of strategic autonomy and a safer, more resilient society.

Its combination of hardware and software provides an integrated solution that remains operational even when digital communication is disrupted. P-X Systems' technology enables real-time, air-gapped communication, meaning it operates entirely isolated from digital networks such as the internet. The company plays a crucial role in enabling compliance with the NIS2 cybersecurity directive, which will become mandatory for organisations in critical sectors including energy, food, transport and government.

SecFund

SecFund—a collaboration between the Ministry of Defence, the Ministry of Economic Affairs and Climate Policy, and the regional development agencies (ROMs)—focuses specifically on dual-use companies. These companies develop products or services that can be applied in both civilian and defence contexts. The nationwide implementation of the fund is coordinated by the Brabant Development Agency (BOM), in collaboration with the other ROMs.

For SecFund, this investment is particularly relevant as OT security is a relatively young and rapidly growing domain. There are currently no dominant players in Europe, giving leading providers such as P-X Systems a strong opportunity to establish a leading position.

"As we celebrate our 10th anniversary, we are proud to welcome the VC investment vehicle of the Dutch Ministry of Defence, SecFund, Damen Maritime Ventures, and Savin Capital Partners in the next stage of growth for P-X Systems as we serve an increasing number of clients in high-security environments", Julian Wynne, Founder P-X Systems, Amsterdam

Damen Maritime Ventures' investment in P-X Systems addresses a growing societal and security challenge. As maritime operations become increasingly digitised and interconnected, the importance of robust OT security continues to grow — including within the civil market. P-X Systems is well positioned to play a relevant role for the customers and markets in which Damen operates. With this investment in the Dutch company P-X Systems, Damen aims to actively contribute, together with private and public partners, to the security challenges of our time.

“We invested in P-X Systems because it offers a unique EU sovereign OT security solution where AI-powered threats are exponentially increasing in sophistication and scale. Critical infrastructure operators need the ability to maintain visibility and operational resilience, particularly in disconnected or compromised environments. P-X provides a simple, unique approach to solving exactly that”, Bas Emmerig, Savin Capital Partners, Amsterdam

Note to editors:

Damen Maritime Ventures

Damen Maritime Ventures provides growth capital to high-tech companies developing innovative solutions with a maritime application. Damen Maritime Ventures is a wholly owned by the Damen Shipyards Group—a globally operating shipbuilder and maritime services provider headquartered in the Netherlands. Damen Maritime Ventures invests in companies that align with the Damen Group’s digital and sustainable strategy and core markets.

Savin Capital Partners

Savin Capital Partners is an Amsterdam-based investment firm focused exclusively on the dual-use and defence tech sector, offering tailored financial solutions for companies strengthening Europe’s security and industrial resilience.

ROM Nederland

Innovative entrepreneurship is essential to the Netherlands’ future earning capacity. Change is driven at the regional level. Through a nationwide, supra-regional network, the Regional Development Agencies (ROMs) act as catalysts for addressing major societal and economic challenges, including the energy transition, food transition, healthy ageing, and security. We support entrepreneurs by collaborating on innovation, providing investment, and facilitating internationalisation. ROM Nederland is the partnership of the following Regional Development Agencies: BOM, Horizon Flevoland, Impuls Zeeland, InnovationQuarter, LIOF, NOM, Oost NL, ROM InWest, and ROM Utrecht Region. www.rom-nederland.nl
